Cove Cleaning & Maintenance

landscapeforms

Over time, Cove can be exposed to wind and weather. With regular maintenance, you can ensure it stays in top condition for as long as possible. An annual cleaning using a mild detergent or the Renson® Maintenance Kit will help maintain the color for years. We recommend carrying out maintenance on your installations at least twice a year in coastal or forested regions.

How to Clean

01. Before cleaning, remove any loose direct with a brush or vacuum cleaner.

02. Clean Cove using a soft cloth or brush with a mild detergent to remove dirt, dust, grease or moss from the aluminum and from any screen fabrics.

Do not use corrosive or harsh products, scouring pads, or other scouring products. Do not use high-pressure equipment in any case whatsoever.

Other Maintenance Notes

- The mains connection should be made by a qualified electrician in accordance with applicable standards.
- We recommend having a regular technical inspection by your installer biannually in extreme conditions (e.g. coastal areas).
- Part of maintenance includes removing twigs, leaves, bird nests, etc. should they occur.
- Do not use a barbecue or fondue under a closed bladed roof. Make sure that the blades are open so that smoke can escape easily.
- Notes on color variations: minor color variations may occur during the manufacturing process between the color guides and the profiles of the sun protection screen. There may also be minor color differences between components and profiles.
- Outdoor curtains are washable at 75°F (30°C) on a delicate cycle. Hang out wet. Remove creases with a steamer.
