Northport Collection

“We’ve created a collection that fits into cities and towns whose architecture has grown over the course of many, many years. It had to feel relevant to today, but it also had to embody that traditional spirit, that sense of place, that sense of history.”

—Daniel Lobitz, AIA, Partner at Robert A.M. Stern Architects

Heritage Informs a Contemporary Spirit

In the Northport Collection, past and present, history and innovation, shared stories and stories yet to be written all convene in harmony. The collection evokes warm, emotional connections to communities' roots with aesthetics and performance designed for the now.

Created in collaboration with Robert A.M. Stern Architects, renowned authorities of Modern Traditional design, the collection spans the breadth of Landscape Forms' offerings. Encompassing benches, lighting, litters, bike racks, planters and bollards, Northport offers a modern reinterpretation of the design lexicon that is foundational to so many traditional American towns and cities, historical centers, and main street districts. Drawing from significant design precedence while embracing innovative materials and technologies, the collection serves as an elegant, authentic bridge between traditional and contemporary architecture and makes for a cohesive complement to other Landscape Forms and Robert A.M. Stern Architects collections.

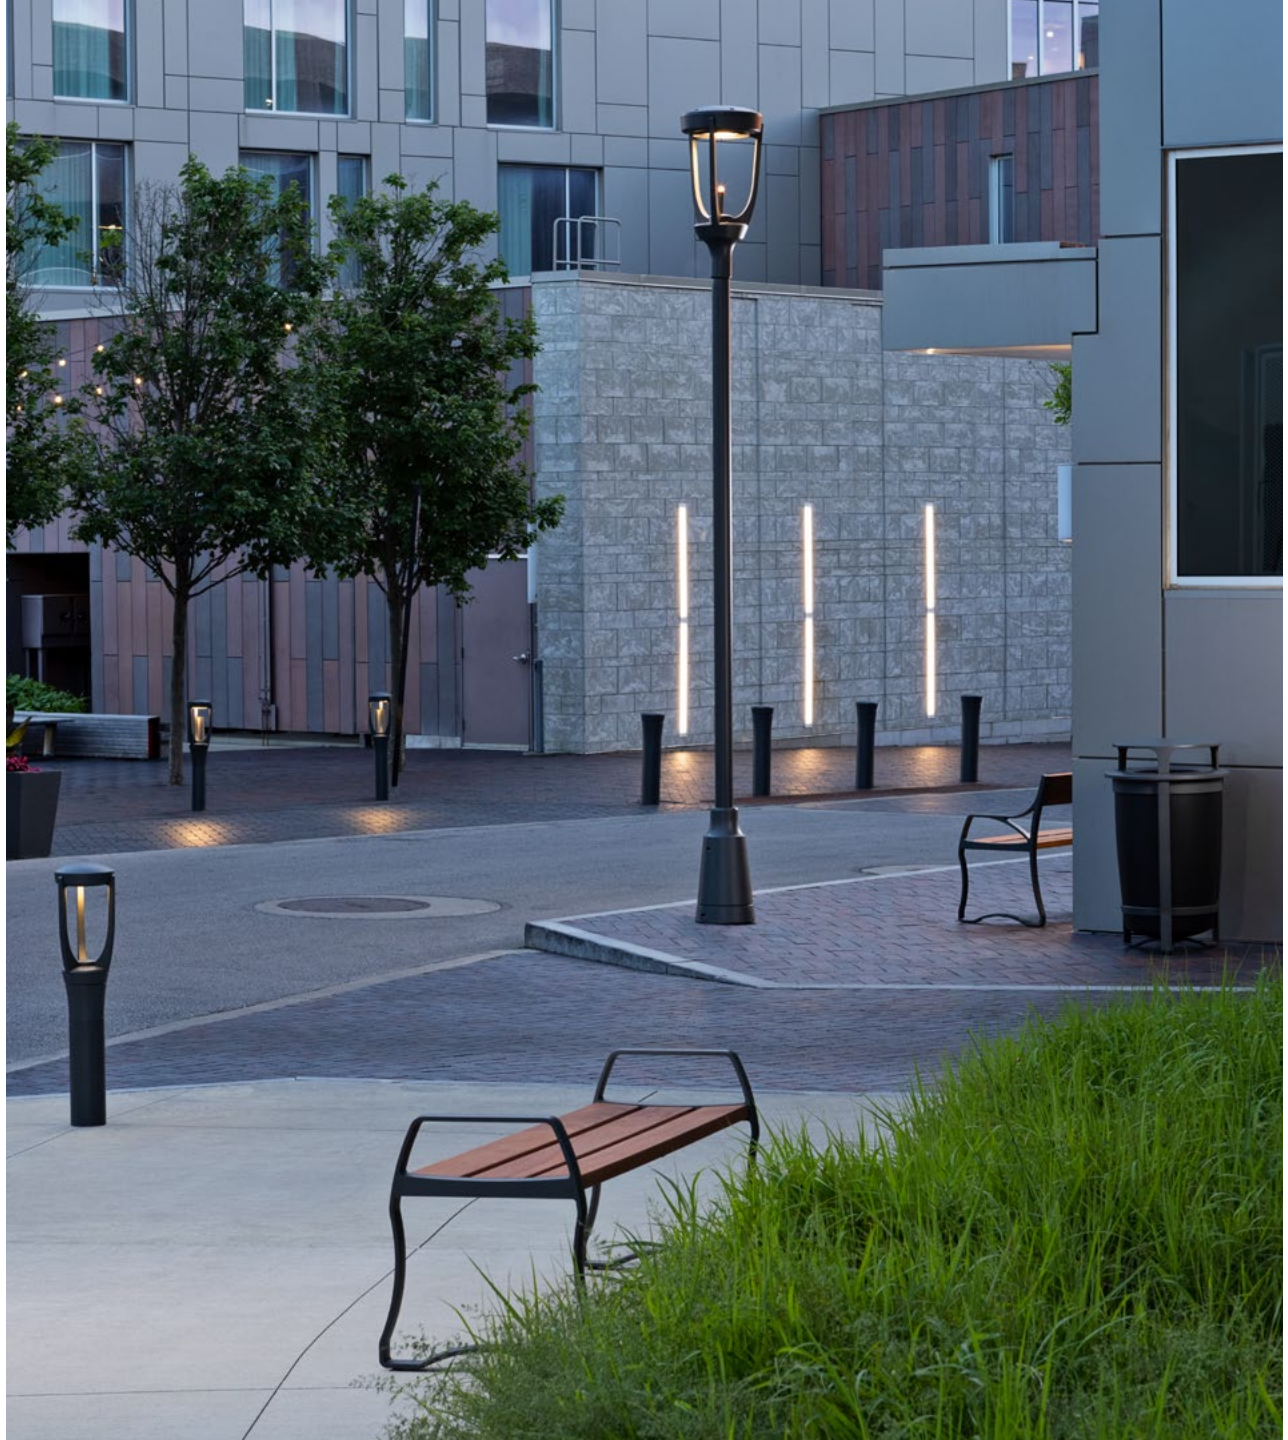
Preserving a Sense of Place, Inspiring a Modern Experience

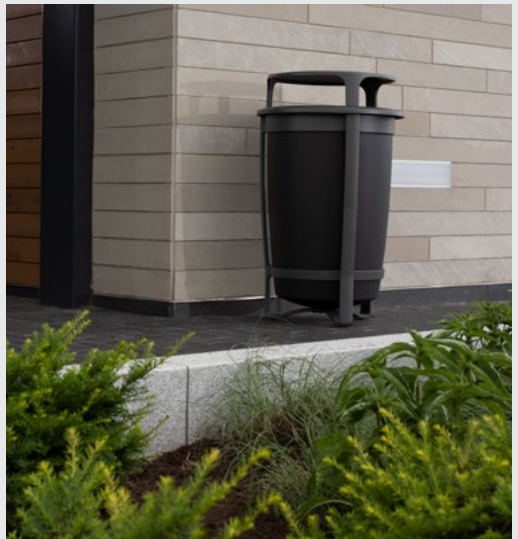
With graceful curves punctuated in softly rounded corners at the arms and sled legs, **Northport benches** reimagine the appearance of early 20th century cast iron park benches in refined aluminum and naturally-weathering wood. Available in backed, backless and back-to-back configurations, the versatile trio is evocative of classical landscape architecture, but with a modern and reserved elegance all its own. The benches can be specified with freestanding, surface, and embedded mounting options.

Drawing inspiration from the ubiquitous acorn streetlamp, Northport lighting merges advanced LED technology and optics with an homage to the traditional-style lights deeply rooted in American landscape design heritage. Rather than as a glass dome, the “acorn” form subtly appears in the negative space between the arms at the top of each luminaire.

Northport area lightluminaires offer clear or diffused lenses in multiple outputs and distributions to offer pleasing, low-glare illumination. Inside the Northport's area lights, a LED element mounted below the lens subtly recalls gas lamps or early filament bulbs, inspiring nostalgic connections and reinforcing the sense of place. Options for the Landscape Forms visual comfort and performance light engines adapt the area light's visual experience, tailoring illumination to a wide range of settings and scales. Designed for applications up to 16', the collection's area lights are available in both single and double pole-mount or pendant-arm-mount configurations.

With similar stylized acorn silhouettes, **Northport path light** luminaires complement the collection's area lights, using their asymmetric or symmetric distributions to warmly illuminate and extend the use of footpaths and pedestrian promenades.





Designing a Seamless Aesthetic

Reflecting the sculptural curvature of the Northport benches, the collection's litters, planters, and bike racks each are modern reinterpretations of iconic early 20th century craftsmanship. Their cast aluminum legs and frames evoke the era's hallmark decorative ironwork, but with the refinement, grace and visual lightness only modern materials and techniques can achieve. **Northport litters** are available in top and side opening configurations, feature large 30-gallon rotomolded bodies, and offer robust aluminum and steel construction. **Northport planters** are available in small and large sizes, also with rotomolded bodies and robust aluminum and steel construction. With gentle curves and a subtle taper, Northport bike racks are durable cast aluminum forms that can be embedded or surface-mounted for security.

Northport decorative bollards frame, define and protect installations with a handsome presence. The subtly tapered aluminum casting complements the curvature found throughout the collection and provides elegant cover for a robust steel ground connection.
