## Rosa™ Planter

### Recommended procedure for surface mounting:

Planters ordered with the surface mount option have a 1/2" hole drilled at the center of the bottom. The planters may also have a drain hole located off-center. Although anchoring procedure and hardware are the responsibility of the installer, we recommend the following:

1. Select corrosion resistant anchor appropriate for the surface. Your hardware store or builders supply may be able recommend proper hardware, tools, and safety equipment. Follow anchor manufacturer's instructions for drilling hole and installing anchor.
2. Place planter in desired position.
3. Mark hole location.
4. Move planter to allow access for drilling hole.
5. Drill hole at marked location.
6. Place planter and install anchor.
7. Tighten anchor until snug.

**CAUTION:** Over tightening the anchor could damage the planter.
