Changing the Role of the Outdoors

People flourish when they're in close connection to nature. Yet, these experiences are too often few and far between. Scenic changes this dynamic, reimagining the new and different roles that outdoor space can play in the everyday. It's the next generation of modular outdoor structure, simplifying the creation of outdoor destinations that provide premium experiences without compromise, and enable people to enjoy the benefits of time spent outside as a ritual in daily life.

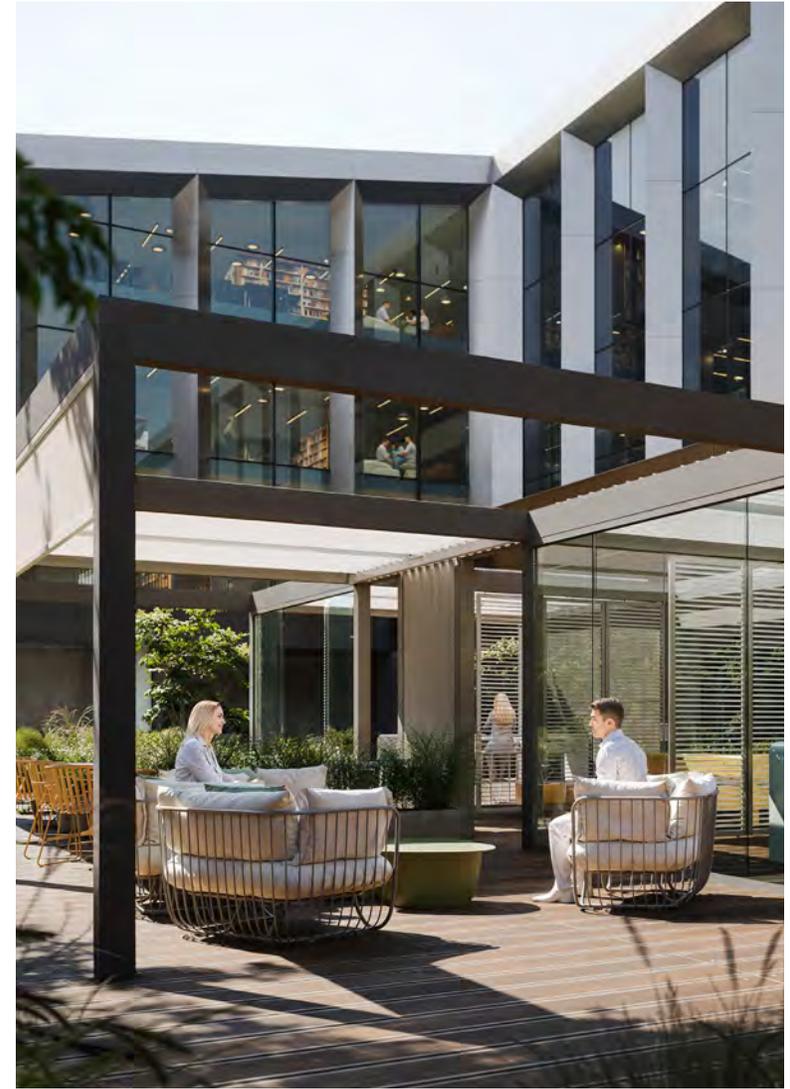

Do It All, Do It Well

From college and corporate campuses, to luxury hospitality settings, to rooftop amenity spaces, to high-traffic public outdoor areas, Scenic's versatility transforms a wide range of outdoor spaces into tailored destinations – enhancing the way people live, connect, learn, work, care, play and travel. The structures scale up or down to address a project's unique design goals, functional requirements and site-specific considerations. Freestanding or façade-mounted, Scenic can range from a simple, single pergola to an expansive multi-unit structure, fully customized with infill panels, lighting and accessories. And its modularity enables structures to adapt even after initial installation.

Comfort Without Compromise

Comfort is the key to enjoying life outdoors year-round. Scenic extends the seasons with motorized roof louvers, rain and wind sensors and integrated water management that work together to combat the elements.

The roof louvers operate via switch or remote control to adjust the interior climate or can be paired with sensors to automatically open and close during high wind or precipitation. Completely flat when closed, the louvered roof overhangs its gutters to neatly channel water down through designated posts to the base of Scenic, or into a prepared site drain.

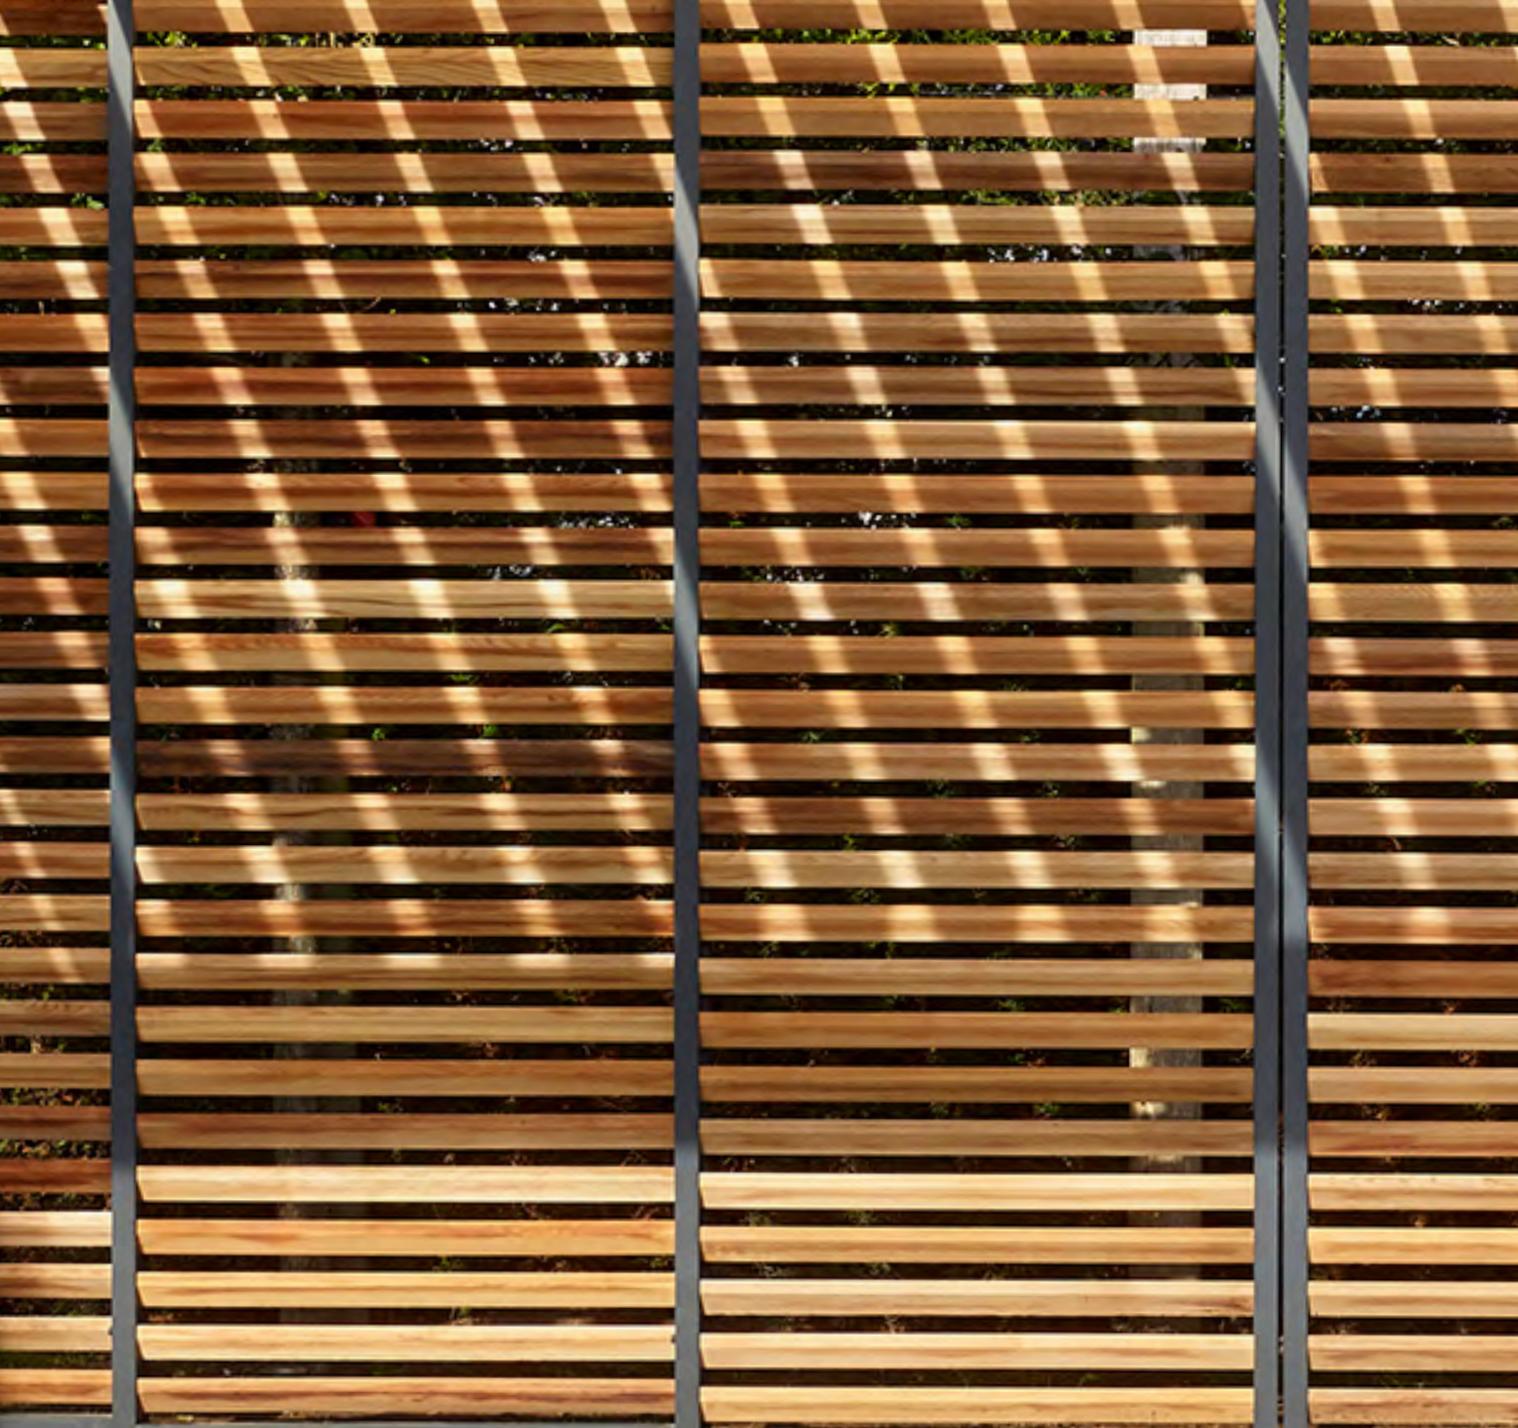

Set the Scene

Unique to Scenic is the wide range of standard options and amenities that can be used to tailor its user experience. Including various side infill solutions, LED lighting and comfort- and design-focused customizations, these are the details that transform outdoor spaces into destinations that people seek out and return to time and time again.

Side Infills:

Louvered Panels Wood or aluminum horizontal slats offer space definition with breathability.

- **Fixed Louvers** Semi-private with a connection to the outdoors
- **Privacy Louvers** Adjustable to control the degree of privacy and protection from the elements

Solid Wall Full- and railing-height solid walls shelter the interior space with decorative appeal.

- **Horizontal Profile** Available in full and railing height
- **Vertical Profile** Available in full height with two styles offered: Block 30 and Even

Glass Panels Full wind and weather protection provided with unobstructed vistas.

Fixscreen® motorized and fully retractable screens offer versatile options for privacy, solar shading and insect protection.

Louvered, glass infills can be stationary or paired with tracks or rails to function as sliding doors.

Lighting:

Louwer LED Warm overhead lighting spanning the entire length of a roof louwer.

Up/Down LED Lighting neatly integrated into the roof perimeter.

Column LED Vertical lighting neatly integrated into the columns on the interior and/or exterior of the structure.

Accessories:

Power Garage

Dining Height Peninsula Table

Standing Height Peninsula Table

In-Line Bar Table

In-Line Bench

Whiteboard (tempered safety glass)

Elegance in Simplicity

Both in aesthetics and functionality, Scenic embodies elegant simplicity. Its refined lines, hidden fasteners and clean connections between components reinforce its quality of fit and finish while complementing a variety of architectural styles. Structures ship with machined and tapped holes for all connections to ensure a simple and timely installation. Landscape Forms offers a dedicated installation services team to further streamline installation.
