Upfit

From Spaces to Places

We have long believed that people thrive when they have a strong connection to nature in their daily lives. And we believe people deserve access to outdoor spaces that support them without compromise. But now more than ever, it is crucial to the health and well-being of our communities that people have the spaces and resources they need to bring the fundamental aspects of everyday life outdoors without sacrificing productivity, happiness, social interaction, and mental health. This new dynamic is answered in Upfit, an adaptive structure system with a modern style and endless flexibility to transform outdoor spaces into functional destinations. In the new era of social distancing and moving work, study and other activities outdoors, Upfit's benefits have become even more acute. Its modular, scalable nature transforms underutilized outdoor areas into work spaces, classrooms, dining areas and meeting hubs, fully powered, lit and with the amenities people need to live, learn, work, care, play, and travel outdoors.

Options Shown: Green Panels, Slatted Panel, Straight In-Line Table, Power Garage, Louvered Roof, Louvered Panels, Glass Panel (custom color)

From Vision to Reality, Simply

Upfit has taken the complexity out of designing custom outdoor structures with a beautifully designed and expertly engineered system. Simple to specify, Upfit starts with a single 16' x 16' x 10' base unit of posts and beams. Add infill panels, retractable screens, benches, tables, storage solutions, and roof, power, and lighting options. Then let us handle the rest...from first estimate and project management to site inspection and site installation.

Options Shown: Glass Panel (custom color), Corner In-Line Table, Louvered Panels, Glass Panels (white), Standing Height Peninsula Table

Versatility by Design

Upfit's versatility allows each structure to tell a unique story. Regardless of an application's spatial requirements, functional needs, or aesthetic design, it can accommodate a range of solutions with options including:

Roof Options

Louvered Roof
Solid Roof

Storage

Bike Rack
Floating Shelf

Do What You Do Best and We'll Handle the Rest

Upfit is a collaboration among experts in architecture, industrial design, outdoor structures, out-door site furnishings, and LED lighting. The collective expertise of Landscape Forms, KEM STUDIO, and StruXure Outdoor is evident in every aspect of Upfit, from its design, engineering and manufacturing, to its project management, delivery, and installation. And Upfit is built to last. Structural components are warranted for 15 years of daily outdoor use; electrical components are warranted for five years; and panels and all accessories for three years.

Design a New Kind of Outdoor Destination

Create Place

Panels provide enclosure, space division, and function. Louvered panels angle to shade interiors. Both vertical and horizontal slatted panels provide semi-private outer and interior division. Glass panels can also act as markerboards. Green panels with wire screens create lush planted walls on the exterior and interior of the structure. Retractable screens and sliding panels delineate space and let in sunlight and fresh air. In-line and peninsula tables, mitered standing-height tables, and in-line benches attach to the structure to create working, reading, and perching spots. Bike racks can be added to the system to keep bicycles secure.

Manage Weather

Upfit can be specified with either a solid or louvered roof. The louvered roof system manages weather conditions and protection from sun, rain, snow, and wind. The motorized system operates via a switch, remote control, or smart device app. Optional rain and wind sensors detect precipitation and close, or excessive wind speed and open, to minimize uplift. When the louvers are closed, rainwater is directed to a gutter system designed into the louvers that drains water through a post to the base of unit or into a prepared site drain.

Provide Power

Upfit posts and beams route electricity to power lights, display monitors, overhead fans, and charging ports for devices.

Add Light

Extend Upfit's hours with lighting and control options, including uplighting and lighting from third-party manufacturers.

Compose the Perfect Finish

Structural components come in seven powdercoated colors, including low-sheen choices from our Designer Palette: Architectural Series, to create a fresh statement that complements Upfit's interior and surroundings. Accent the space with white, red, green, blue, yellow, and black glass panels and warm wood tables in ipe, jarrah, and domestically sourced, thermally modified ash.

Options Shown: Remote Control, Power Garage, Green Wall, Straight In-Line Table, Weather Sensor, Motor and Power Supply

Meet Our Partners

KEM STUDIO

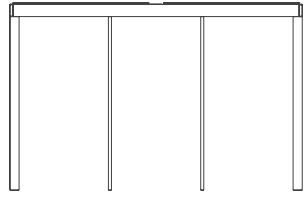

Founders Jonathon Kemnitzer and Brad Satterwhite created KEM STUDIO based on the idea of “better design better living,” a philosophy that merged industrial design and architecture to approach projects more holistically. The firm has received numerous awards, including GOOD Design awards for product and architectural design, Best of NeoCon award, HiP honors, IDEA awards, and AIA awards.

StruXure Outdoor

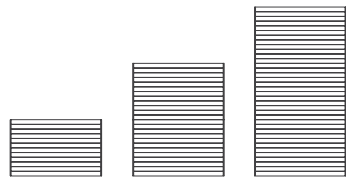

Founded by CEO and Chief Product Architect Scott Selzer, StruXure Outdoor is the building industry’s premier designer and manufacturer of high-quality pergola and shading structures. With patented products and advanced technology expertise, StruXure has become one of the fastest growing companies in the United States, appearing on Inc’s 5000 list for the past four years.
